

Press Release

10 January 2020

Knaus Tabbert at CMT Stuttgart: new products for model year 2020

Stuttgart/Jandelsbrunn (Germany). What could the future of the caravan be like? What might motorhomes look like in five or ten years' time? Nobody knows exactly. But there are many different approaches, ideas and concepts. However, one thing is clear: The recreational vehicle of the future is a combination of innovation, technology and unique design – and it is made by Knaus Tabbert.

As an innovation driver in the industry, the company, which is based in lower Bavaria, is always working on new approaches. In doing so, they never lose sight of one thing: consistent customer orientation and unique design. In this spirit, the year 2020 begins: An experienced, motivated and highly qualified team working at the Jandelsbrunn, Mottgers, Schlüsselfeld and Nagyoroszi locations demonstrates courage and the power of innovation. At the CMT, Knaus Tabbert created great anticipation and excitement among guests with its presentation of innovative new product developments and refreshing ideas.

The future is well within reach: In close cooperation with Bosch Engineering, Knaus Tabbert is working on developing an intelligent 48-volt wiring system in order to completely redefine freedom. That means: independent power supply in the caravan, a longer period of self-sufficient camping – and the retention of all everyday comforts. What could the future of the caravan be like? What might motorhomes look like in five or ten years' time? Good question. But one thing is clear: The recreational vehicle of the future is Knaus Tabbert.

KNAUS, WEINSBERG, TABBERT, T@B, MORELO and RENT AND TRAVEL – Knaus Tabbert presents all three brands in three halls at the CMT: C2, 3 (MORELO) and 10 (KNAUS and WEINSBERG CUVs).

Exciting and powerful innovations, new groundbreaking motorhomes, CUVs and caravans – the highlights of model year 2020 include:

Innovations

- Powerful: **Charging booster** available in series for all motorhomes and CUVs.
- Clean: **Filtered water** in all Knaus Tabbert models – as a standard.
- Rugged: Every **rear carrier** is not the same: The optional **e.hit** for all motorhomes:
- Safe: **Head-up display** in the media package for all motorhomes and CUVs.
- Smart: optional **voice control** available in the new TABBERT CELLINI.
- Exciting: With the **48-volt wiring system**, Bosch Engineering and Knaus Tabbert are working on creating a completely new caravanning freedom.
- Carefree: **Maintenance and repair** of all KNAUS and WEINSBERG Motorhomes available at 29 **MAN service centres**.

KNAUS

- **KNAUS is celebrating a major birthday:** 60 years of KNAUS and the 100th birthday of company's founder Helmut Knaus.
- Completes the LIVE family: the new **LIVE I** – Fully integrated at an entry-level price.
- Elegant: the successful **SKY TI** is now available as the fully equipped **PLATINUM SELECTION**.
- Extravagant and futuristic: the **SPORT&FUN** is now available as the **BLACK SELECTION** in black and silver-grey.
- Bigger on the inside than on the outside: the **BOXSTAR** with new, spacious high-roof layout.

WEINSBERG

- The new addition to the family: the **CaraCore**, the first fully-integrated WEINSBERG model, offers the highest degree of comfort in the mid-size vehicle class.
- Classic models: **CaraCompact** and **CaraCompact EDITION [PEPPER]** in new designs.
- WEINSBERG classics: the **CaraOne** with a fresh new look, now also with a lifting bed.
- The first series production CUV for more motorcycling fun: **CaraBus** and **CaraTour 630 MEG [OUTLAW]**.

TABBERT

- More innovative, refined and modern than ever before: **PUCCINI** sets new standards in the superior class.
- Pure luxury on wheels: **CELLINI** re-defines the high-end standard.

T@B

- Iconic, cool, **T@B**: the modern retro classic continues to improve as it successfully enters model year 2020.

Show cars - KNAUS LIVE I and WEINSBERG The CORE

- Striking: the KNAUS LIVE I and WEINSBERG The CORE show cars are truly eye-catching, and show what the exterior design of a motorhome can look like.

RENT AND TRAVEL

- Rent a vehicle, get in, and enjoy your holiday: Currently, there are more than 160 rental stations and 1,900 vehicles available – this also includes rental motorhomes.
- Innovative, unique booking system: Caravan hire made simple.

Powerful: Fully charged

According to ADAC statistics, the number one cause of road traffic breakdowns is a faulty or empty battery. That is the last thing that anyone needs when setting off on holiday. From model year 2020, all Knaus Tabbert motorhomes and CUVs will be fitted with a high-performance charger as standard. This will enable the vehicle's battery to be charged more safely and quickly.

Clean: Purified water in all Knaus Tabbert models

Water is the elixir of life, but it is not always available in the right quality. Chlorine, lime, heavy metal particles, suspended particles – several kinds of residues can be detected in local tap water. Water, which is stored in containers and pipes for a long time, does not remain fresh. Worst of all, heat causes a film to form in the water tank, which provides an ideal breeding ground for microorganisms and germs. Even today, there at some campsites, holidaygoers cannot be certain if the water will be clean and potable. However, Knaus Tabbert customers no longer have to worry about being subjected to poor quality of drinking water. From model year 2020, all vehicles will be fitted with a space-saving **BWT water filter system** (Best Water Technology) as standard, to ensure a supply of clean, germ-free water. The water is filtered, and the taste is made more pleasant. Even coffee and tea taste better. In the 2020 models – and in all previous Knaus Tabbert vehicle designs – the BWT water filter system can easily be expanded with a retrofitting kit.

Rugged: Integrated “e.hit” rear carrier for KNAUS and WEINSBERG motorhomes

This is not just a rear carrier. In the new model year, the new and innovative **e.hit rear carrier** for KNAUS and WEINSBERG motorhomes is available on request. It has a double pivot arm for bikes and transport boxes, and **a removable trailer coupling**. The e.hit is attached directly to the chassis, and **automatically swings out from underneath the bumper within 25 seconds at the touch of a button**. The “e.base” is a removable accessory base with retractable LED taillights and indicators for increased safety, which fits onto the rear carrier. The electrical system is automatically connected to the vehicle. The e.carry bike carrier and/or the e.box transport box can be attached to the accessory base in just a few simple steps. Thanks to the e.base, accessories do not need to have their own tail lights, and the electrical connection to the vehicle does not have to be configured manually. The e.carry offers room for two bikes, and has a maximum loading capacity of 83 kg. A bike carrier for two additional bikes can also be added to the system, reducing the maximum loading capacity to 74 kg. If the 320-litre transport box is attached to the vehicle, as opposed to the bike carrier, the maximum loading capacity is 72 kg. The e.box is made of sturdy plastic and weather-resistant, multi-layer folding top fabric. All e.hit accessories are also lockable, and their contents are protected against theft.

Safe: Head-up display for KNAUS and WEINSBERG motorhomes and CUVs

The practical and stylish **head-up display** – which is included in the optional media package – is a special new item of equipment for model year 2020, and a unique feature of KNAUS and WEINSBERG motorhomes and CUVs. The transparent screen shows navigation instructions, the current and permitted speed, and traffic signs directly in the driver's field of view. As the name suggests, it keeps an eye on the direction of travel, and gives a “heads-

up". This is a major plus for road safety. And at the same time, the head-up display integrated in the dashboard looks extremely good – function and design are innovatively combined.

Smart: “Hello CELLINI” – Smart TABBERT with voice control

“I’m cold”, “Switch on the kitchen light” – these are just two commands that the TABBERT CELLINI will be able to understand from model year 2020 onwards. It can dock with the smarthome world of the camper. On request, the caravan is available with an interface for voice control using Apple, Amazon Echo and Android devices. Voice control can be used to operate various functions of the caravan – from lighting to heating and air conditioning, to battery information and the water level. Even complete lighting programmes in the bedroom, living room and kitchen can be saved under “Good night”, “Good morning” or other commands.

Thrilling: 48 V electrical system – Knaus Tabbert and Bosch Engineering are working together on the caravan of the future

Knaus Tabbert and Bosch Engineering GmbH, a 100% Bosch subsidiary, **are working together on an all-new energy concept for motorhomes, to redefine the meaning of “freedom” in the context of caravanning. The innovative 48 V electrical system offers an independent power supply for the caravan, and generates, saves and provides electricity, therefore enabling a higher level of self-sufficient caravanning, maximum mobility, and all comfort.** A modular, multi-component system with electric motors on the axes makes it possible, regardless of the towing vehicle, to convert braking energy into electrical energy (**recuperation***). This is stored in li-ion batteries, and can be used in the caravan to power devices such as the fridge, air conditioning and the coffee machine. The manoeuvring function is also integrated in the system, so that the caravan can be easily and comfortably positioned on the campsite.

The cooperation with Bosch Engineering continues Knaus Tabbert’s MISSION TEC project, which was launched six years ago. The 48 V system, which is especially for recreational vehicles, significantly improves the self-sufficiency of motorhomes. It is considered to be a key technology for e-mobility, and is also conceivable for motorhomes. Without an external power source – completely independent of the towing vehicle or shore power. Experience much greater freedom than before without having to forego any comforts of home. More specifically, this means: watching TV for two hours per day, six hours of light, listening to the radio for two hours, making a cup of coffee. With the current state of the art (without an external power supply), the energy of a 12 V system is sufficient for almost **one and a half days**. A 48 V power system lasts significantly longer – i.e. up to **six and a half days** – for the same consumers. And even in your absence, “power guzzlers” such as air conditioning can be operated and maintained by the 48 V system, so that the caravan will always be at a pleasant temperature in the summer.

Self-sufficiency, recuperation, sustainability, e-mobility and digitisation – Knaus Tabbert and Bosch Engineering are working together on the caravan of the future, and to revolutionise recreational vehicles by reaching another MISSION TEC milestone.

***Regenerative braking – Recuperation:** Kinetic energy generated during driving is transmitted to the electric motor via a transmission during braking, and stored as electrical energy in the li-ion batteries.

Carefree: MAN service stations offer a full service package for all KNAUS and WEINSBERG motorhomes

Even the best motorhome requires maintenance, servicing and repairs from time to time. It helps if there is a service station nearby, as opposed to miles away. Together, Knaus Tabbert and MAN Truck and Bus Service are working to significantly improve the service quality of KNAUS and WEINSBERG customers. In 2020, 29 MAN service stations in Germany provide maintenance, servicing and repairs for all KNAUS and WEINSBERG motorhomes – a gradual expansion of the service network is planned. Highly qualified MAN service station staff carry out extensive work on both the base and the body of the vehicle. The employees of the participating service stations have experience with KNAUS and WEINSBERG superstructures, and have received intensive factory-based training in the specific characteristics of motorhomes and their technology. See the KNAUS and WEINSBERG websites for information on the new service stations.

KNAUS

KNAUS vehicles begin model year 2020 in even better shape: motorhome models **VAN TI PLUS** (standard), **SKY TI**, **SKY WAVE** and **LIVE I** (optional) include a **gas cylinder storage space**. This has room for two 11 kg cylinders, which can easily be attached and connected, thanks to the pull-out mechanism. Starting in the new model year, the garage doors of the four vehicles named above – and those of the **SUN I** – can be fitted with a central locking system on request. In model year 2020, the **LIVE series** includes a new rear tail light carrier with **KNAUS CATEYE evolution lights**, which gives the vehicle an even more distinctive look and a high level of recognisability. The innovative **VAN TI PLUS** on a MAN TGE base includes 2-channel air suspension in the rear axle as standard. The **SUN I** includes LED headlamps (dipped and high-beam) as standard. **VAN I** and **SUN I** have GRAMMER Luxury or Super Luxury seats in the driver's cabin, with re-designed backrests and a generous passage area for even more comfort. These seats can also be ordered for the **LIVE I** on request.

The key to success: just like caravans, motorhomes are much safer in the new model year, thanks to an internal locking system bearing the KNAUS logo. **Caravans with children's beds** also have new bunk bed lights with an integrated USB socket.

KNAUS is celebrating a birthday

60 years of KNAUS and the 100th birthday of company's founder Helmut Knaus

He was an engineer and an inventor who played a major role in shaping the recreational vehicle industry: Helmut Knaus (1920 - 1991) founded KNAUS KG in the town of Marktbreit (near Würzburg) in 1960. Even during the years of World War II, Knaus had the idea to construct a caravan for the new VW Beetle. His vision: it should be compact, comfortable

and lightweight. It should also be round like a swallows' nest, which was the name it was given. And when the **KNAUS SCHWALBENNEST** was introduced in 1961, the world of caravans was immediately enriched by another top-selling model. Helmut Knaus also created the suitable **corporate logo**: a **flying pair of sparrows** – a logo that, even today, still adorns the body of every **KNAUS** vehicle. The launch of the **SÜDWIND** in 1962 introduced a further iconic caravan to the market. Today, it is among the **best-selling models of KNAUS caravans**. In the 1960s, based on the great success of KNAUS products, Helmut Knaus begins a phase of expansion. New production capacities are created in Ochsenfurt and around 1970 the new main factory in Jandelsbrunn (near Passau) begins operations. Furthermore, Helmut Knaus continued to drive the expansion of the European sales and services network, which today includes about 600 partner companies. The competitor **EIFELLAND** was acquired in 1973. In 1974, KNAUS acquired the camping van manufacturer **WOLFBART**. In 1973, Helmut Knaus is awarded the Federal Cross of Merit for his courage and pioneering spirit. In the 1980s, KNAUS advanced to one of Europe's leading caravan manufacturers. Today, KNAUS is one of the industry's most successful brands and has been building innovative motorhomes for over 30 years: The TRAVELLER is the first model and is launched in 1988. It immediately receives the sought-after title "Motorhome of the year" presented by the trade journal promobil. In 1996, the traditional companies KNAUS and TABBERT begin a cooperation that ultimately results in their 2001 merger. This merger led to the founding of the Knaus Tabbert Group GmbH. In 2005, the company launches the first CUV from KNAUS.

Following the global financial crisis in 2009, the newly founded Knaus Tabbert GmbH relaunches operations with strong investors at its side. From this point forward, numerous successful models followed: In 2012, with the introduction of the SKY I, KNAUS created new benchmarks and completely redefined form, function and quality. In 2013, the CARAVISIO concept designed by KNAUS introduced an entirely new streamlined design, thereby anticipating a completely new design language for caravans. In 2015, with the SUN I, the Jandelsbrunn-based company made an impressive return to the liner luxury segment. With introduction of the TRAVELINO in 2016, Knaus introduced the first ultra-lightweight caravan in fibre-frame technology, a step into the future of caravan construction. The DESEO, which was launched in 2017, was conceptualised using the same ground-breaking construction principle. Furthermore, in 2016 the best-selling partially integrated motorhome in Germany was introduced, the TI. Beyond this, with its programme THE MISSION, the company is paving its future course – with the major focus being on innovative lightweight construction. In 2017, after introduction of the LIVE model series, the largest and most attractive range of models in the company's history has been completed. Collaborative efforts with VW (BOXDRIVE) and MAN (VAN TI PLUS) followed. In being awarded the "Golden Motorhome 2019" by trade journal Auto Bild Reisemobil, the new KNAUS VAN TI PLUS 700 LF on MAN TGE basis immediately won the special editorial prize for the "Best new vehicle in 2019" – only one of numerous prizes that KNAUS products have been awarded. This is also proof of the extraordinary team spirit of the Knaus Tabbert employees.

Motorhomes

L!VE I

The L!VE series owes its success to the TI, WAVE and TRAVELLER models. The L!VE family is now complete, thanks to its new arrival: **L!VE I** sets new standards in the segment of the fully-integrated motorhome – even more so than a semi-integrated model with a standard lifting bed. It is therefore the perfect choice for the switch from semi-integrated to fully-integrated. Price-sensitive costing is evidence of KNAUS' highest design and quality requirements. The progressive and dynamic exterior design, with the distinctive KNAUS pattern in blue, grey and black, and the impressive front reflect the strong character of the vehicle. Even more striking is the optional styling package with chrome strips on the radiator grille, carbon optical elements, lateral window shades with the "L!VE I" logotype on them, and black & grey foliation. The standard **full LED headlights**, in a distinctive U-shape, underline the appearance and ensure excellent vision and recognisability. At the back, the KNAUS CATEYE evolution tail lights with indicators and three-dimensional lighting geometry also ensure safety and easy recognition. The L!VE I on a Fiat Ducato base is available with two layouts (650 MEG and 700 MEG) in the new model year. Both have a **reliable total weight of 3,500 kg**, and impress with sophisticated details. **The new centrally-locking door of the driver's cabin has a storage net, a parking ticket holder, and a coin tray.** The interior is dominated not least by the large panoramic windscreen, which provides a first-class sense of space. The spacious L!VE offers sufficient standing height and storage space, four seats in driving operation, and thanks to the standard fold-up bed, up to five places to sleep. In the generous seating area, which has a side seating bench and an extendable table, there is enough room to eat with the whole family or visitors. An L-shaped seating group (instead of the central sitting group) with a height-adjustable single-leg lifting table is available on request. Cross-laminated wood and accents such as white furniture fronts with matt-silver handles give the interior a modern, refined and cosy character. Energy-efficient LED lighting immerses the interior in a pleasant light. Ceiling-mounted cabinets with a soft-close function, spacious wardrobes, EvoPoreHRC mattresses, a three-flame cooker, and a large 142-litre Thetford fridge with AES function (automatic energy selection) are also included in the L!VE I as standard. A 177 litre, 700 MEG Dometic fridge is optional. Both layouts are also available with GRAMMER seats, ALDE heating, and a gas cylinder storage space on request. Dynamic, functional, modern, and at the same time elegant and inviting – the new L!VE I more than honours the typical L!VE characteristics – active, vibrant, comfortable, cosy. The **fully-integrated model is available for EUR 59,990** and offers a unique price-performance ratio.

SKY TI and SKY TI PLATINUM SELECTION

In model year 2020, the successful **SKY TI** is now available as a fully equipped **PLATINUM SELECTION** special model. The redesigned interior of the special model makes the living space cosier and inviting. The partly-integrated model is also available with a gas cylinder storage space, which enables the simple, secure connection of two 11 kg cylinders. With its side seat to the right, the 650 MEG layout offers more room in the seating area.

The standard equipment of the **PLATINUM SELECTION** includes: rotatable seats in the driver's cab, a height-adjustable passenger seat, passenger airbag, air conditioning in the driver's cab, an insect protection door, upholstery with "PLATINUM SELECTION" embroidery, a COSY HOME package with decorative cushions and pillows, bed linen and a

table runner, ambient lighting, an electric entrance step, TRUMA iNet system, cruise control, a DAB+ radio, an all-in-one navigation system with camping software and three-year map update, a head-up display, electrically adjustable and heated external mirrors, and so much more. Unlike the series model featuring similar equipment, the PLATINUM SELECTION offers a considerable price advantage for customers.

Caravans

SPORT&FUN BLACK SELECTION

The extreme athlete of the caravan world – that is the **SPORT&FUN**. For the new model year, the SPORT is now also available as the stylish, extravagant **BLACK SELECTION**. As the name suggests, this edition model replaces the green and blue design with high quality black and silver-grey. The exterior of the BLACK SELECTION has a striking, very elegant appearance thanks to the carbon look of the film graphics, and the brushed stainless steel. The external attachments also have a carbon look. The roof rails and the rear ladder are also black. The KNAUS logo also includes the emblem of the BLACK SELECTION – the familiar swallows on a black background. With the carbon look, KNAUS 17" aluminium wheel rims and dimmed taillights, the extravagant model is automatically reminiscent of a racing car. A special feature of the new caravan: it includes an **AL-KO VARIO X chassis** as standard. As a logical further development of the TRAVELINO chassis, it marks the next step in chassis design. The VARIO X chassis combines bionic weight-saving measures, with high load-bearing capacity and stability: **a lightweight, bionic construction**, which is based on the forms of nature, with the best driving characteristics – a greater load capacity and therefore more comfort and flexibility are therefore possible. The new colour scheme also dominates the interior of the BLACK SELECTION. The special edition GREY STRIPES upholstery in the seating area, and the interior lining of the rear door with vertical stripes in various grey tones, give the interior an elegant appearance. Silver-grey curtains, dark kitchen work surfaces, furniture fronts with durable CPL ALU (aluminium) decor, matt black handles – and a welcoming, bright look thanks to the large window. The SPORT&FUN BLACK SELECTION gives caravans a new and distinctively futuristic appearance, and is perfect for anyone who values both style and functionality. As an edition model, the SPORT&FUN is also available with the familiar 480 QL layout.

CUVs (Caravanning Utility Vehicles)

BOXSTAR XL

Variability, a large amount of storage space, elaborate technology – the **BOXSTAR** embodies CUV expertise in terms of perfection. The range expands in model year 2020: say hello to the **new high roof 600 STREET XL and 600 LIFETIME XL designs**. The already great sense of space in the BOXSTAR is made even greater with the high roof – there is a great amount of headroom for tall people, and the rooms are bright thanks to the skylights. There are two separate, spacious bedrooms (one at the front, one at the rear), and four large beds in the 600 LIFETIME XL – a unique feature of this vehicle class. The new **ComfortSlide bed** at the back can be pushed easily and smoothly into the sleeping position, and has a large reclining surface. Comfortable cold-foam mattresses, textile sidewall panelling, indirect LED lighting, and numerous storage compartments and cupboards with

soft-close function ensure a high level of living comfort. An open bath is also optionally available. In addition, the new BOXSTAR layouts offer ample space for various items of camping and sports equipment. The new high roof also sets the pace in the industry, through its strong design language. The striking, casual design not only looks good, it is also highly functional. Rainwater can be optimally drained. Another characteristic feature of the new high roof is the sandwich structure with an integrated insulating layer against cold and heat. Despite the high roof, the 600 STREET XL and the 600 LIFETIME XL are very compact and perfect for everyday use. Thanks to the integral construction of the roof, the vehicles have a reduced structure height. That means that structures such as the rear roof hood, the air conditioning or the SAT-TV system are integrated into the continuation of the roof area, so that the structure is not considerably higher. Flexible, spacious on the inside but compact on the outside – the new BOXSTAR high roof layout impresses as a unique, unrivalled vehicle for families, athletes and adventurers alike.

WEINSBERG

A lot has happened at WEINSBERG in preparation for the new model year: all vehicles have a new, distinctive look; and with 17" aluminium wheel rims (available in anthracite or black matt), these caravans – just like motorhomes and CUVs – have a refined and modern look, and a high degree of recognition. Also new in the 2020 series: a new, modern key for the cabin door and service hatch, with internal locking system. The new exterior graphic design of the motorhome further highlights the WEINSBERG character – modern, striking, stylish and timeless. On the inside, **motorhomes and caravans** are enhanced by exclusive WEINSBERG furniture handles and durable, lightweight and extremely comfortable EvoPoreHRC mattresses as standard. The **new rear tailgate** characterises the exterior of the WEINSBERG caravans and motorhomes, and makes them recognisable from a distance. The full-LED rear lighting of the motorhomes ensures a greater degree of safety and a longer lifespan. The exterior of each caravan also has a new, characteristic WEINSBERG cut, thanks to the new TREND door and construction with modified front radius. The stylish **CaraTwo** shines, thanks to its new exterior: the revised front section results in harmonious, and at the same time striking, lines – rounded off by the new unmistakable WEINSBERG film graphics, which highlight both the brand name and series name in a 3D effect. These innovations also feature in the CaraOne EDITION [ICE], which has firmly established itself on the market since its introduction in model year 2018, and now has the new more compact name **CaraOne [ICE]**. This caravan for all seasons is part of the WEINSBERG family.

Motorhomes

CaraCore

"Your holiday!" is WEINSBERG's slogan – i.e. this is the right vehicle for anyone, whether they are young or young at heart, a caravan aficionado, or an adventure seeker. A new member of the fleet completes the well-rounded product portfolio: the **CaraCore**, **WEINSBERG's first fully-integrated motorhome**, is synonymous with the highest level of comfort in the mid-size vehicle segment – perfect WEINSBERG quality and design. That is noticeable at first sight – a progressive design for a perfect exterior and an impressive

design; front and rear in characteristic style. Strong contrasts in headlamp edging and radiator grille, a white-framed windscreen which is visually elongated vertically and horizontally, as well as clear lines and surfaces give the CaraCore an unmistakeable look. The tight film graphics, the COMFORT body door and an integrated guard on the side panel also add to the distinctive design. Optional styling packages can make the vehicle even more striking – with 17" aluminium wheel rims, and numerous accents and inlays for the sidewalls, which also ensure a higher degree of safety in combination with the standard full LED lighting. A **gas cylinder storage space** is also available on request. Three layouts for the CaraCore on a Fiat Ducato base are available for the new model year: 650 MF, 650 MEG and 700 MEG. The spacious interior impresses with its open viewing axis and a great sense of space. The large windows let the light flood into the bright, welcoming interior. Cross-laminated wood in combination with light furniture fronts and rounded edges dominate the modern yet cosy interior design. The ceiling-mounted cabinets above the seating group and kitchen are characterised by the new, brand-specific **"Signature Element"**. The energy-saving LED design ensures the perfect interior and ambient lighting. There is room for four people in the CaraCore in driving mode; and thanks to the standard lifting bed at the front, it sleeps up to five people. A practical travel companion for families. The bed length of over two metres, high-quality EvoPoreHRC mattresses, drawers with soft-close function, 24" LED TV, and an interior width of 2.18 metres ensure a high level of comfort in every way. The kitchen is equipped with a large 142-litre fridge with AES function (automatic energy selection) and a three-flame cooker as standard. The 700 MEG CaraCore layout offers the largest open bath in its class. The 650 MF has a comfortable bench toilet. The fully-integrated design is available with ALDE heating on request. Carefully considered detail in the driver's cab: **the cab door has a pleasant soft-touch surface and electric window regulators, as well as a ticket holder, a practical storage net, and a bottle holder.** Functional, stylish, modern, authentic, and with lots of storage space: the new CaraCore, costing from EUR 55,990, is a typical WEINSBERG design – and the perfect vehicle for anyone who values the best quality and design at an unbeatable price-performance ratio.

CaraCompact and CaraCompact EDITION [PEPPER]

The **CaraCompact** and the fully-equipped special model **EDITION [PEPPER]** equals success on wheels. For model year 2020, WEINSBERG has made its series and special models even better, with new exterior and interior designs. The newly designed roof hood, the new rear bumper and the window stickers add a modern touch, and highlight the dynamic character of the vehicles. The roof hood, with integrated insulation, is produced as standard with fibre-reinforced polyurethane. This so-called **LFI technology (long-fibre injection)** was previously impractical for models of this price class, and is therefore unique. LFI components are lighter, odourless, extremely robust and resilient, both in extremely high and freezing temperatures. A striking detail at the rear: the full LED lighting, which ensures increased safety. Series and special models are available with an optional, practical **gas cylinder storage space**. The interior boasts a modern yet cosy atmosphere. Ambient lighting, ceiling cabinets with brand-specific signature elements, cross-laminated wood, homogeneous and matching furniture, and a large panoramic skylight (130 x 45 cm) which is available on request, the **unique interior designs** of the CaraCompact – especially that of the EDITION

[PEPPER] – impress. The new MALABAR upholstery makes the seating area in the special model truly eye-catching, with dark-brown imitation leather, combined with beige material and decorative stitching. Copper-coloured cushions, bedding and table runners add stylish accents. The colour scheme also features in the shiny copper handles of the ceiling cabinets. Simple but striking patterns on the kitchen worktops and on the back wall behind the bed give the interior of the EDITION [PEPPER] a certain *je ne sais quoi*, and a very special atmosphere. The layouts of the series and special models have also been optimised for the new model year. The 600 MG is replaced by the 600 MF, which has a more refined appearance, a large French bed (measuring over two metres in length), and a bathroom with a bench toilet. The bed in the 600 MEG design is over two metres long, and the bathroom has a modern pull-out wash basin. Drawers with soft-close function, a large 142-litre fridge with AES function, and a 24" LED TV complete the furnishings of the vehicle. **By the way: The CaraCompact EDITION [PEPPER], with comprehensive standard equipment and a unique price-performance ratio, has been Europe's most successful motorhome for several years.**

Caravans

CaraOne

Sleek, aerodynamic and well thought-out from the front to the back – despite its young age, the CaraOne is already among the WEINSBERG classics. For model year 2020, it is better and more stylish than before, with a newly-designed exterior and interior, and two new layouts. The re-designed front section and the new rear tail light carrier make the caravan even more striking. The new film graphics in anthracite and champagne also contribute to this, as they emphasise the brand and series logotype and highlight the stylish character of the CaraOne. Depending on the layout, caravans on an AL-KO chassis have a large wraparound windshield at the front. In the modern interior, bright furniture fronts, cross-laminated wood, high-quality materials and new upholstery and fabrics create contrasts and a harmonious environment – matching the furniture and the ambient lighting. In short: the atmosphere has a feel-good factor to it. The kitchen, with its three-flame cooker and large 133-litre fridge with AES function and freezer compartment (depending on the layout), will warm the heart of every aspiring chef. There is plenty of storage space, not just in the spacious bathroom – which has a towel rack and a shower curtain with inflatable tubing – but in the whole vehicle. The CaraOne layouts range is expanded for the new model year, with the new **390 PUH** and **540 EUH**. A special feature: **the large lifting bed** for two people, above the round seating group at the rear. The compact 390 PUH, which has a usable length of four meters, also impresses with its 2.09 metre interior height, spacious front kitchen, wraparound windshield and 142-litre refrigerator. As the 540 EUH is designed for the family, the single beds at the front provide two more sleeping spaces. An optional 32" TV is available in both of the new layouts.

CUVs (Caravanning Utility Vehicles)

CaraBus and CaraTour 630 MEG [OUTLAW]

Sporty and modern, equipped with elaborate details – including true WEINSBERG CUV expertise – that is what **CaraBus** and **CaraTour** represent. With the **new 630 MEG**

[OUTLAW], the range of layouts expands even further for model year 2020. **The first CUV in the range with fixed rear garage** has a **loading capacity of 220 x 148 x 137 cm** – i.e. **4500 litres** – and is in a league of its own. There is space in the more than generously sized garage for sports equipment of all kinds. Even a motorbike or quad bike can be transported in the CaraBus or CaraTour 630 MEG [OUTLAW]. To prevent the unpleasant smell of petrol from entering the living space, the hold is elaborately, and almost hermetically, sealed. The sidewalls and furniture of the garage have a durable, impervious CPL coating. There are also standard practical lashing rails for securing various items of sports equipment and travel essentials. Despite the focus on all things sporty and practical, the living comfort in the new 630 MEG [OUTLAW] floorplan is uncompromised – there is a spacious kitchen with a two-ring hob and compressor refrigerator, a spacious CUV bathroom, plenty of storage space, diesel heating as standard, a comfortable bench seat, and a “floating” Comfort Entry table without a cumbersome table leg. What’s more: the fixed bed above the rear garage has an **ample sleeping surface, measuring 197 x 170 cm**. Sleep above, load below – the [OUTLAW] is ideal for athletes. The new WEINSBERG CUV 630 MEG is not just the ultimate leisure companion for everyone, but also ideal for artisans, fitters and other professionals who are regularly out and about and have to transport a lot of equipment. The practical [OUTLAW] is a true universal genius.

TABBERT

For 60 years, TABBERT models of the highest quality and with great attention to detail have been constructed at the plant in Mottgers. Premium caravans in the 2020 series have numerous optimisations, including a new outside lock and internal locking system. There are additional sockets in the seating area. Thanks to the optional city water connection, which is now underneath the vehicle floor, it is possible to securely connect the caravan to the public water supply – water therefore no longer has to be taken to the vehicle. If the framed windows option is selected, the caravan will now also be equipped with a large, curtained front window. On request, most models can be ordered with **17” aluminium wheel rims** in either crystal-silver or white sheen, which highlight the refined appearance and premium character of TABBERT vehicles. In the new model year, the **VIVALDI 685 DF** includes a practical linen cupboard, instead of a wardrobe, which makes the spacious kitchen 30 cm wider, meaning that it offers more work space.

PUCCINI

The re-designed **PUCCINI** sets new standards in the superior class – it is more innovative, refined and modern than ever before. The two-tone furniture fronts perfectly accentuate the dark cross-laminated wood used in the exquisite interior. A special design feature: **the new, unique lighting concept**. Along with the indirect lounge lighting, illuminated panels in the entrance area, bathroom and kitchen immerse the interior in a pleasant, warm light. The lighting panels are truly eye-catching, as their rhombic pattern incorporates the characteristic element of the familiar TABBERT emblem. The same pattern can also be seen on the reading lamps. The exclusive lighting design and the selection of fine materials give the interior a new feel, and a new dimension of well-being in the superior class. Several practical

storage and stowage compartments, as well as numerous sockets, a large 177 litre fridge with twin connector (depending on the layout), the TRUMA iNet system and the Combi 6 heating also contribute to this. In the new model year, the single beds are now 93 cm wide. The revised floorplan portfolio for 2020 is clearly arranged yet versatile. The 550 E, 560 TD, 685 DF and 750 HTD layouts – complemented by the new 655 EL layout with single beds and a large seating group – sleep up to four people, and have a generous amount of living space in different structural lengths.

CELLINI

The best caravan in the luxury class, incomparable, with a refined character, for stylish campers with a passion for the extraordinary – that is the **CELLINI**. From model year 2020, it has a new automotive, futuristic exterior design. The large, dark-glazed window, which covers almost the entire width stern, dominates the striking rear view, and the shunting bar bears an illuminated 3D CELLINI logotype. The front has also been “edged” and contributes to the impressive appearance of the CELLINI. In the newly-designed interior, the CELLINI models show that they are at the absolute top end of the luxury range. Dark wood with stainless steel accents, as well as the highest quality materials, give the living room area a very elegant appearance. The **new lighting concept** also makes a strong contribution to this: in the entrance area and in the bathroom, illuminated panels with rhombic patterns provide pleasant lighting. The rhombic design of the TABBERT emblem also features on the reading lamps. The wall in the sleeping area is adorned with a number of small lights, the rays of which create a subtle rhombic pattern. Other interior innovations: thanks to the **unique ceiling cabinet construction** with integrated LED ambient lighting, neither the handles nor the snappers are visible, thus resulting in homogeneous furniture surfaces. The light shades of the new PURPLE STONE (fabric), IVORY LEAF (imitation leather) and CREAM NATURE (genuine leather) upholstery are a slick contrast to the dark wood. If the genuine leather design is selected, the U-shaped seating group is equipped with adjustable headrests, and a small integrated table with cup holders, a plug, and a USB port. In addition, the degree of hardness of the seats can be optionally pneumatically adjusted. The CELLINI has Combi 6 heating and a TRUMA iNet system as standard. An interface enabling **voice control** through Apple, Amazon Echo and Android devices is available on request. This makes it possible to operate functions such as lighting, heating and air conditioning by voice command. The CELLINI is available as a 655 DF and a 750 HTD SLIDE-OUT in the new model year.

T@B

Timeless, iconic, and with its own superhero (T@BMAN) – the **T@B** is a modern classic. Things can only get better in terms of its details, and the steep success curve remains unswerving in model year 2020. The drop-shaped caravan, with its retro design, has a large fanbase and is especially popular with younger customers. The iconic motorhome is available in four styles – BASIC, MEXICAN SUNSET, METROPOLIS (with a 320 or 400 layout design) and OFFROAD (320). There are also five different upholstery colours to choose from. If you are looking for something special, you can't go wrong with the

customisable T@B. Because the vehicle looks bigger on the inside than on the outside, it leaves nothing to be desired. A double bed, a cosy seating area, a kitchen, a BWT water filter – the iconic retro caravan offers everything that a happy camper needs, and more.

Show cars - KNAUS LIVE I and WEINSBERG The CORE

In Stuttgart, KNAUS and WEINSBERG have two special highlights: The two show cars – LIVE I and The CORE – are the metaphorical icing on the cake, and show what is creatively possible in motorhome construction. That's how the KNAUS LIVE I presents itself, with liquid chrome-blue accents – such as the unmistakable KNAUS swallows or the “LIVE I” logotype on the lateral window shades – on a black matt background, which really sets off the distinctive design. The dark colour scheme gives the vehicle a dynamic, casual look. The look of the WEINSBERG The CORE is characterised by a progressive design with copper-coloured applications, e.g. on the side wall protectors. Light and dark contrasts, combined with the design elements, set strong accents and ensure a striking appearance. The distinctive fronts of the two Fiat-based designs also make the vehicles highly recognisable. Full LED headlamps in a unique U-shape in LIVE I; chrome strips on the radiator grille, eye-catching air inlets. The CORE also impresses with full LED headlamps, as well as an eye-catching windscreen, which has been visually enlarged at the top and bottom. The truly unique show cars are merely an appetizer for more of the brand's models and are real eye-catchers in Knaus Tabbert Hall C2.

RENT AND TRAVEL

The **RENT AND TRAVEL** principle is rather simple. Rent, get in, and enjoy your holiday in a motorhome or caravan. **Over 360 partner travel agencies in Germany advise** newcomers and experienced camping enthusiasts on a wide range of topics, such as choosing the most suitable rental vehicle and route planning. At about **160 rental stations** throughout Germany there are **more than 1,900 vehicles** representing the brands **KNAUS, WEINSBERG, TABBERT** and **T@B**. Anyone who is interested can find out more on the RENT AND TRAVEL website (www.rentandtravel.de) and hire a vehicle directly from there. Several best practices of the travel world have been implemented in the development of the online booking platform, which enables easy use by the customer. The platform is structured differently, depending on whether the user is a new customer, a regular renter or a potential buyer. New tool: Travellers with flexible schedules can – either online or in the travel agency – benefit from last-minute offers: Vehicles which are available for a few days between two booked periods can be reserved at short notice during these “between times” for an attractive price.

The customer base and the network of partner travel agencies and rental stations have expanded constantly. RENT AND TRAVEL is aiming to become the number one rental brand for new customers – and is well on the way to achieving that. The number of visits and bookings on the website have grown exponentially over the last few years. The number of rental stations is also steadily increasing. The rental stations are not just located in Germany,

but vehicles can also be rented in Sweden: There are rental stations in Stockholm, Gothenburg, Kristinehamn, Norrköping and Lulea. Scandinavia isn't the only popular camping destination. Rental stations have also been established in the Italian cities of Venice, Milan, Modena and Bologna. Discover Europe on four wheels, embrace the freedom and spontaneity of camping, and satisfy your wanderlust – in short: If they could choose, many customers would rather keep their rented KNAUS, TABBERT, T@B or WEINSBERG vehicle and therefore quickly become Knaus owners themselves.

New for the 2020 rental season: Aside from the motorhomes and CUVs, **RENT AND TRAVEL also rents caravans**. A separate RENT AND TRAVEL booking system has been developed for the perfect cooperation between end customers, rental stations and travel agencies. This system has been created especially for the caravan industry, and is unique on the market. New: This system is not just available to RENT AND TRAVEL partners but is also available as a **brand-independent licensing model for all renters in the caravanning sector**. The functions and options offered by the booking system are based on the expertise of RENT AND TRAVEL in all four corners of the vehicle rental world.
